

# Harrington Cancer and Health Foundation

## Project Information

The new Harrington Cancer and Health Foundation building serves as the Survivorship Center and executive offices for the foundation. The Cancer Survivorship Center is dedicated to helping cancer survivors live their lives to the fullest after treatment. The new center features a wig room, counseling rooms, massage room, group workout space, and a kitchen for nutrition classes and workshops. Located in the medical center next to a creek, the building is sited to maximize the view to the north by way of floor to ceiling glass in the main areas and a large outdoor patio and meditation garden. Exterior stone, glass, and weathering steel materials were selected to blend into the surrounding landscape and create a space where the users can feel at one with nature. At night color changing RGBW LED lighting illuminates the exterior porches and the nine foot tall floating ribbon sculpture to pay respect to the many colors of the fights against cancer.

## Concept Statement

A new Survivorship Center serving cancer patients in the Texas Pahandle

## Structure

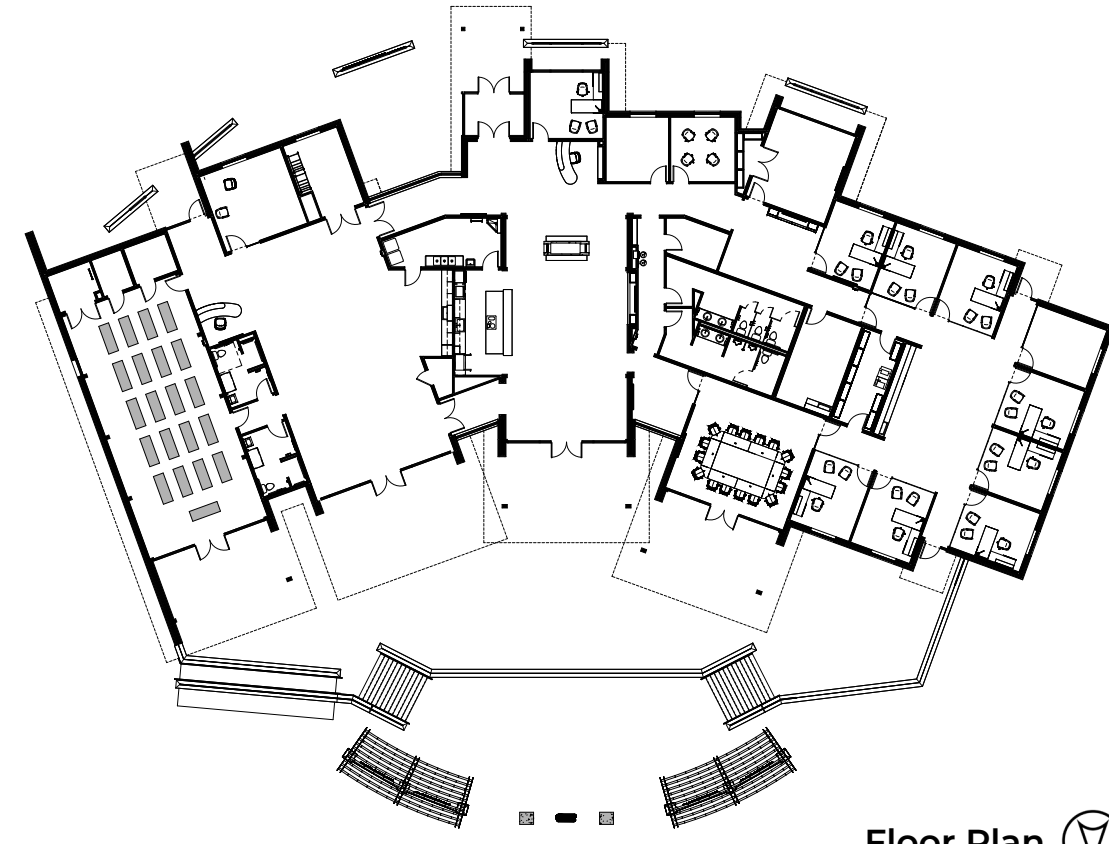

Structural Steel Framing, Storefront Glazing, Masonry, Standing Seam Roofing and RGBW Exterior Lighting

## Building Area

12,584 SF New Construction

## Project Team Members

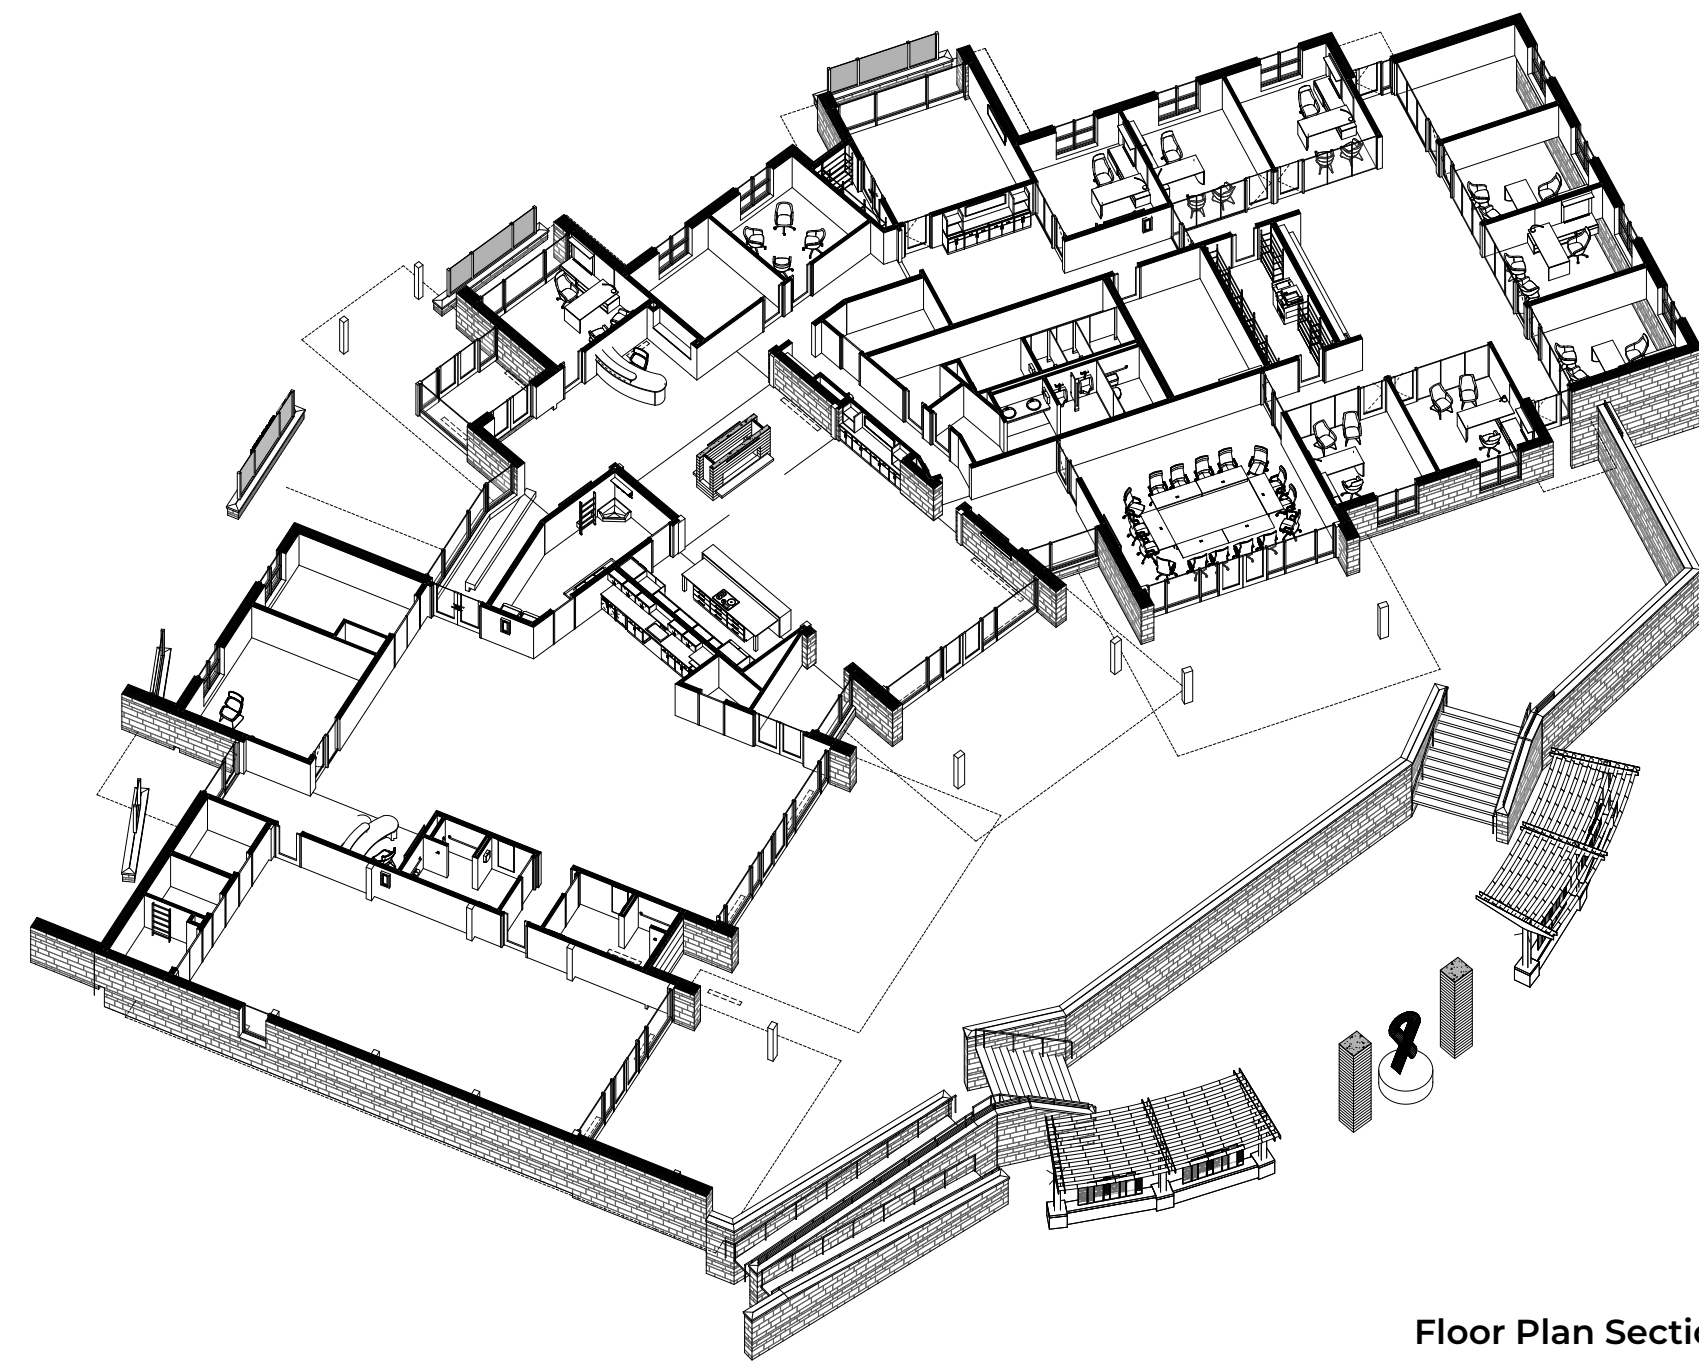

- Jon Gamel - Architect
- Kelli Henson - Interior Designer
- Jeff Gallardo - Senior Designer
- Sheila Sims, AIA - Architect
